2022	<p>Mini Fibre Extraction Machine</p> <p>In North-East regions, there are plenty of tender coconut husks available from temples which considered as waste. In order to convert these unwanted materials in to a good coir business, CCRI, Coir Board has recently developed a mini fibre extraction machine mainly for the extraction of fibre and pith from green tender coconut husks/ coconut husks available in different areas and temples/ tender coconut venders. This machine can also be used by small scale house hold units as per their availability of husks. Coir pith/powder obtained can be converted into bio manure and use in flori, horti and agriculture purpose. The production capacity of this machine is around 2000-2500 Nos. of husk per day and the fabrication cost is only Rs.75, 000/-.</p>
