## PRODUCT DEVELOPMENT AND DIVERSIFICATION

YEAR	ACTIVITIES	ACHIEVEMENTS
1990-91	57 novel designs were evolved for FF mats, mattings and jacquard mattings.  An album containing new designs was prepared.  75 design photographs for weaving products of novel designs were supplied to the trade.  375 samples of rubberised coir were tested. A Rubberised Coir Testing Laboratory was set up at Central Institute of Coir Technology, Bangalore.  Rectified the initial warping defect observed in the composite board from coir-needled felt coated with PF resin.	<ul> <li>3.Woven carpets from yarns spun from blends of softened coir / wool / goat hair.</li> <li>4.Evolved coir needled felt with jute and High Density Poly Ethylene scrim/web.</li> <li>5.Developed coir gyps-</li> </ul>
	Coir Ply Board  Coir Ply Board  The project for development of gypsum coir composite panels in collaboration with Regional Research Laboratory, Jammu Tawi was implemented.  The collaboration project on attitude of soir with for conjugational forms for retention of	um composites in collaboration with Regional Research Laboratary, Jammu Tawi and successfully used as panelling/ ceiling material.
	The collaborative project on utilisation of coir pith for agricultural farms for retention of moisture content with TNAU was continued.	

YEAR	ACTIVITIES	ACHIEVEMENTS
1991-92	The 4 shaff semi -mechanised loom was put to intensive performance run and achieved an output of 50 sq. meters of matting with a 160 picks per meter in 8 hours of work.  Developed samples of composites were made from coir needled felt and phenol formaldehyde resin under the collaborative project with Regional Research Laboratary, Thiruvananthapuram.	1. Composites were made from coir needled felt and phenol formaldehyde resin under the collaborative project with Regional Research Laboratary, Thiruvananthapuram.
1992-93	Sample matting with novel designs and ribbed mattings with design embossed on the face of the matting with multi shaft combination weave were woven on the jacquard loom.  Constructional modifications were effected in weaving of ribbed matting and panama matting by switching over to 4 shaft weave from 2 shaft weave.  103 designs suitable for FF mats, mourzouks/carpets, jacquard matting and half oval matting were developed.  Extracted lignosulphonate from coir pith successfully in the lab level.  Developed polymer composite boards of improved appearance and finish by vapour cure coating.  The wood veneered particle boards were tested at Indian Plywood Industries Research Institute, Bangalore that conformed to IS-3097.  Developed gypsum boards by sandwiching layers of coir needled felt with layers of gypsum, which have properties like low thermal and sound conductivity, smooth finish and easy machinability.  Cationic softeners and polymer emulsion were used	<ul> <li>14. Lignosulphonate was extracted from coir pith.</li> <li>2.Softening of coir fibre using reverse soaps.</li> <li>3. Developed coir polymer composite boards of improved appearance and finish by vapour cure cotting.</li> </ul>

YEAR	ACTIVITIES	ACHIEVEMENTS
	PILLOW STUFFED WITH SOFTENED COIR FIBRE  CUSHON SEATS STUFFED WITH SOFTENED COIR FIBRE ON SOFTENED COIR MATTING	
1993-94	Admixed coir with cotton and a new variety of coir mat was developed using cotton waste as brush and coir yarn as base fabric, which has a soft feel.  Samples of cushion and pillows were produced using softened coir fibre.  Studies were conducted on stiffening with emulsions of acrylic and rubber latex.  The technology of preparation of polycoir from coir needled felt and PF resin was transferred to M/s Saurashtra Cements and Chemicals Ltd., Bombay	
	90 new designs were supplied to interested parties.  Pilot scale studies in extraction of sodium lignosulphonate from coir pith yielded 10 % lingnosulphate.  Polycoir boards in various sizes were produced including plycoir boards of 7 <sup>1</sup> x 4 <sup>1</sup> boards with lamination paper and fancy design paper.  Samples of rubber-coated coir needled felt tile boards were made.	

YEAR	ACTIVITIES	ACHIEVEMENTS
1994-95	7 novel designs were produced in jacquard power loom A few samples of coir matting using 12 shaft were evolved for weaving on dobby loom. Bicoloured warp was used for weaving novel designs on Jacquard loom. Samples of coir matting with thick Quilandy yarn as warp was woven on the semi automatic loom for conducting experiments in surface evaporparative cooling of roof of the buildings.  A laboratory spray drier was installed for spray drying of organic compounds from coir pith and ret liquor  A field demonstriation on use of mesh matting covering an area of 1000 sq.m was laid on the banks of Muvattupuzha Irrigation Canal.  Muvattupuzha Irrigation Canal	1. Commenced testing of coir pith for nutrients and issue of phytosa-nitary certification for coir pith.
	82 new designs were evolved for stencilling on fibre mats, rugs of matting and creel mat 73 design cards were supplied to the exporters at a total cost of Rs. 1612 /- Samples of coir needled felt were coated with different binders.  A pilot scale laboratory for production of "PITHPLUS" was set up for composting coir pith. An amount of Rs. 14702/- was realised from sale of 816.8 kg pithplus.	

YEAR	ACTIVITIES	<b>ACHIEVEMENTS</b>
	The Board extended 3-day training course on use of pithplus.  Road slopes of a housing colony covering an area of 640 sq.m at Elite Gradens, Thrissur was laid with coir mesh mattings planted with vetiver grass for soil stabilisation.  The technology for manufacture of coir ply/coir matting decorative boards was transferred to M/s Duroflex Coir Industries Pvt.Ltd, Bangalore  Elite Gardens, Thrissur	
1995-96	Operationalised pile wire loom and samples of creel mat produced.  Samples of curled coir, Jacqard matting and brush mats were treated for fire retardancy and evaluated the efficiency of treatment  Monitored the field demonstration of application of geotextiles at Moovattupuzha Valley Irrigation Project and Thrissur.  Tested NPK content in raw/composted coir pith 11,340 PITHPLUS valued at Rs.257040/- was sold from the Pilot Scale Laboratory.  Pile Wire Loom  19 new designs suitable for coir mats, 26 designs for printing on mats/mattings were developed.  12 new patterns of matting were woven on jacquard power loom.	

YEAR	ACTIVITIES	ACHIEVEMENTS
1996-97	Developed 68 designs suitable for weaving and printing on coir products like mats, mattings and carpets.  3 novel designs suitable for weaving matting on jacquard loom were evolved and woven 82.5 sq.mtr. of matting.  Sample of chrome lignosulphonate extracted from coir pith was assessed for its properties as a drilling mud additive at Institute of Drilling Technology, Dehradun.  Sample of sodium lignosulphonate was submitted for testing at Jadavpur University at Calcutta.  3 sites were identified for laying of coir geo-textiles in the District of Idukki, Kerala.  Laid 500 m² of coir geotextiles at Upputhodu in the District of Idukki in Kerala State.  Rs.962623/- was realized from sale of coir needled felt of various nominal densities.  Initiated an experimental field study in the application of coir geotextiles in soil stabilization of bunds for control of irrigation of paddy fields at Moncombu in Kuttanadu in collaboration with Rice Research Station, Kerala Agricultural University, Kerala by laying coir geotextiles of basket weave for reinforcing the mud wall.	1.Field demonstration on application on coir geotextiles at Upputhodu, Idukki.  2. Field study on the application coir geotextiles on mud wall reinforcement.
1997-98	Samples of sodium lignosulphonate extracted from coir pith was tested by M/s Business Universal Incorporation., Pune and reported that the sample could withstand 26 charge and discharge cycles on application on two different types of lead acetate batteries.	

YEAR	ACTIVITIES	ACHIEVEMENTS
	Sample of lignosulphonate was sent to Gumpro Limited, Bombay for testing its suitability for their requirements.  A mesh matting of H2M1 quality was developed on the Jacquard machine with suitable modification which can be unfolded to a width of 3.4 mtrs even though the width of Jacquard loom is only one meter which is beneficial to the industry as a wider fabric can be woven on the small width machine.  A field demonstration on laying of coir geotextiles for prevention of soil erosion was carried out in Sikkim covering an area of 2000 m² of land with coir geotextiles and grass slips were planted as vegetable cover.  Geotextiles laid site - Sikkim  Monitored the work on coir geotextiles carried out at Upputhodu in Iddukki District and planted fresh grass slips before the outset of monsoon in the areas affected with serious draught.  Laid 1530 m² of coir geotextiles at Kudal under Konkan Railway Project for controlling the soil erosion on the slopes of railway embankments.	1. Conducted a International Workshop on Wet Processing of Coir for disseminating the find-ings of Food and Agric-ultural Organisation fun-ded project
	quality at Cheruthoni in Idukki District.	

**YEAR ACTIVITIES ACHIEVEMENTS** 6.Demonstration on the Bench scale trials on manufacture of paper application of coir geo-1998-99 from coir fibre rendered high-grade paper pulp and textiles at Itanagar, paper confirming the potentials of coir bit fibres for Arunachal Pradesh. a new end use. A total area of 4000m<sup>2</sup> land was laid with 7.Demonstration on the coir geotextiles and 200 coco- logs in the field application of demonstration for prevention of soil erosion at Itanagar in Arunachal Pradesh and geotextiles for dam site grass slips were planted as vegetative cover. protection Kakkayam in Kerala Monitored the work on coir geotextiles carried out at 8.Establishment of a Cheruthoni in Idukki District and the growth of vegetation was Computer found to be satisfactory, protecting the slope against soil Design producing erosion. designs. Organised a demonstration on the application of coir geotextiles against soil erosion in the reservoir of the Hydro-9. Coir Research and electric project, Kakkayam using H2M5, covering an area of 3000 m<sup>2</sup> in association with the Extension Centre was Charankattu Coir Manufacturing Co., Cherthala. established at Tenkasi. Tamil Nadu. Conducted an experiment on reinforcement of mudwal at Moncombu with coir matting in association with the Rice Research Station, Moncompu. The matting was fixed to the bamboo and coconut poles at a distance of ½ meter to give it a stable structure. Produced 250m<sup>2</sup> of matting on jacquard loom and 25 sq.m of matting in semi mechanised loom.

False ceiling in the Institute was done using coir matting as demonstration.

bristle fibre

Mesh mattings were woven from Mangadan, Aratory and Brown coir yarn made from

YEAR	ACTIVITIES	ACHIEVEMENTS	
1999- 2000	Memorandum of Understanding on the following collaborative projects were signed with Kerala Agricultural University.  Use of coir Bhoovastra (coir geotextiles) for soil and water conservation at varying slopes.  Use of Coir Bhoovastra for regeneration of exposed rock patches.  Use of Coir Bhoovastra for template planting and as soil mulch.  Providing canal bank protection and assessing the bio- degradability of Coir Bhoovastra.  30 nos. of pillows were made out of softened coir fibre and put to trial for actual use.  CCRI has succeeded in extracting pure sodium lignosulphonate from coir pith.  Experiments revealed that Calcium, Magnesium and Potassium lignosulphonate could be extracted from coir pith.  Monitored the progress of filed demonstrations conducted for protection of hill slopes and road embakment using coir geotextiles at Cheruthoni, Kakkayam and Moncompu and documented.	1.Nucifix dyes in collabo-ration with Triade by and ATO-DLO (Agro Technological Research Instit-ute), The Netherlands	
	A field demonstration was conducted in Kuttanadu for the prevention of erosion of canal bank by laying coir geotextiles at a total length of 30 mtr.		
	Demonstrated the application of coir geotextiles for protection of soil erosion on river banks of Periyar at Chowara, Alwaye.		
	mpression, OCR, web-optimization with CV	ISION's Pd	

YEAR	ACTIVITIES	ACHIEVEMENTS
	Assistance was given for application of coir gotextiles for prevention of soil erosion at hill slopes and cuttings on the Konkan Railway.	
	Collaborative research project with Kerala Agricultural University on the application of coir geotextiles for soil and water conservation, regeneration of exposed rock patches, template planting and as a soil mulch, canal bank protection and assessing biodegradability	
2000-01	Laying of Coir Bhoovastra at Bidadi Industrial area, KIADB, Karnataka was completed. Products evolved from Mangadan coir yarn were consigned to 19 Coir Board Show Rooms and Sale Depots for assessing the consumer receptivity as part of popularisation of the coir products developed from Mangadan coir yarn.  Coir Bhoovastra evolved from Mangadan / brown coir yarn were laid at the banks of railway over bridge near Cochin International Airport Ltd. in controlling soil erosion.  Laid coir Bhoovastra in the campus of Indian Institute of Management, Kozhikode and Soil Conservation Research Station, Konni for controlling soil erosion at various slopes.	1.Testing of Sodium Lignosulphonate as expander in lead acid batteries in collaborati- on with Central Electro Chemical Research In- stitute, Karaikudi.  2. Field demonstration on application of coir geotextiles at Bidadi Industrial Area, Karnataka, at the
	Monitored the Coir Bhoovastra laid site at Kakkayam hydro electric reservoir.  A few products like bags, chappals etc. were evolved from softened coir yarn.	campus of Indian Institute of Manageme- nt, Kozhikode, Kerala, at Konni, Soil Conserv- ation Research Station, Kerala and at Nedumbasseri, Cochin International Airport, Kerala.

Coir Composite Board for top and bottom closures for fibre board drums.

Collaborative project with Indian Institute of Packaging, Mumbai on development of

## **ACHIEVEMENTS**

3. A two week creative workshop on design development and product diversification was held in association with National Institute of Design, Ahmedabad at CCRI.

Collaborative project with Kerala Agricultural University for testing on the bioefficacy of C-POM. (Coir Pith Organic Manure)  Collaborative Project with Indian Plywood Industrial Research and Training Institute, Bangalore for making moulded coir products.  Collaborative Project on Bio-softening and bio-bleaching/brightening of coir fibre with a view to find diversified end uses of the fibre.  Collaborative Project with Project "Sewak" of Border Roads Organisation for the use of Coir Geotextiles at a road embankment site in Dimapur-Kohima road.  Collaborative project with Project "Pushpak" of Border Roads Organisation on the use of Coir Geotextiles at Silchar-Agarthala road.  Collaborative Project with Project "Setuk" of Border Roads Organisation on the use of Coir Geotextiles in an area of about 4000 sq.mtr. at Karimganj bypass in Assam.  Collaborative Project with Project "Deepak" of Border Roads Organisation on the use of Coir Geotextiles at an area of 400 mtrs. x 6.10 mtrs. on a marshy land at 80.000 kms. On Monali – Sarchu road in Himachal Pradesh  Collaborative Project with Project "Udayak" of Border Roads Organisation on the use of Coir Geotextiles at Mon-Naginimari road in Nagaland and Hunli-Amini road in Arunachal Pradesh.
